

TESHWINDEV SINGH

Backend & Full-Stack Developer

Puchong, Selangor, Malaysia | +60 12-234 6614 | teshwindev@gmail.com

PROFILE

Backend-focused software engineer experienced in building RESTful APIs with Python, FastAPI, and Node.js, backed by cloud data layers (Supabase, AWS) and unit-tested code. Comfortable across blockchain integrations, schema validation, and AI-assisted development for rapid prototyping. Hackathon competitor: DevMatch, Solana Ideathon, Google Hackathon.

WORK EXPERIENCE

Backend Development Intern — AstiosTech

Jun 2025 – Sep 2025

- Learned and applied backend development fundamentals using Laravel, gaining hands-on introduction to backend architecture and workflows.
- Contributed to development tasks under mentorship, building foundational experience in structured backend engineering.

Part-Time Helper — Lotus

Oct 2024 – May 2025

- Assisted with customer service, handling inquiries and support to maintain a positive customer experience.
- Handled transport and organization of heavy shipments to shelves, supporting stock flow and store operations.

EDUCATION

Bachelor of Software Engineering — Asia Pacific University, Kuala Lumpur

Jul 2023 – Jul 2026

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C#, C++, SQL

Backend & APIs: FastAPI, Node.js, RESTful API Design, Zod (schema validation), Postman, Thunder Client, Unit Testing

Blockchain: Hardhat, Solidity (Smart Contracts)

Frontend & Mobile: React, Next.js, TypeScript, Flutter

Databases & Cloud: MySQL, Supabase, AWS, Docker, Storacha (decentralized storage)

AI-Assisted Development: Prompt engineering for architecture-aligned code scaffolding and boilerplate generation

Tools: Git, Postman, Thunder Client, VS Code

PROJECTS

Blockchain-Integrated Restaurant Review Platform

- Built a decentralized review system using Hardhat and Solidity smart contracts to ensure tamper-proof, verifiable reviews, with Storacha for decentralized data storage.

Book Inventory API (FastAPI)

- Built a FastAPI-based CRUD service for personal book inventory management, used to test RESTful endpoint design, request handling, and API structuring.

Transit Planner — Malaysian Public Transport System

- Developed a backend-driven transit planning tool with dynamic fare calculation and a community-sourced route data model.

Hackathon Experience

- Competed in DevMatch, Solana Ideathon, and Google Hackathon, rapid-prototyping full-stack and blockchain solutions under time constraints.

WHY I'M A STRONG FIT

A ready-now hire, not a work-in-progress: I have already designed, built, and deployed a production system that a real business runs its daily operations on **live order processing, stock management, and invoicing, not a classroom exercise**. I own it end-to-end — architecture, deployment, and maintenance with no hand-holding required. Based in the Klang Valley and fluent in English and Bahasa Melayu, with working knowledge of Chinese and Russian, I communicate cleanly across teams and time zones, on a stack (Python, FastAPI, TypeScript, blockchain/Web3) that engineering teams run on everywhere.

ADDITIONAL SKILLS

Leadership · Team Collaboration · Communication · Problem-Solving · Adaptability Under Pressure

Languages: English (Fluent) · Bahasa Melayu (Fluent) · Chinese (Conversational) · Russian (Conversational)
