TESHWINDEV SINGH

Puchong, Selangor, Malaysia | +60 12-234 6614 | teshwindev@gmail.com | teshbhatt.com

OBJECTIVE

Dynamic and results-oriented backend developer with hands-on experience in API development, cloud-backed systems, and blockchain integrations. Built and deployed a warehouse management system that a live business now uses. Seeking to apply my backend skills to build scalable, reliable software that solves real business problems.

PROFESSIONAL SUMMARY

- Skilled in Python, FastAPI, and TypeScript, with an understanding of emerging technologies (blockchain, AI-assisted development) and how they solve business challenges.
- Experienced in turning a live business client's operational needs into working features, from order documents to barcode printing and invoicing.
- Committed to continuous professional development and staying up of industry trends.

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, C#, C++, SQL

Technologies/Tools: FastAPI, Node.js, React, Next.js, Flutter, Zod, Hardhat, Docker, Git, Postman, ThunderClient

Cloud & Databases: Supabase (PostgreSQL), MySQL, AWS, Storacha

Others: RESTful API Design, Unit Testing, Smart Contracts (Solidity), AI-Assisted Development (prompt engineering for architecture-aligned scaffolding)

PROFESSIONAL EXPERIENCE

Backend & Full-Stack Developer, Warehouse Management System (Live Production), Malaysia *2026 – Present*

- Designed, built, and deployed a web-based warehouse system (FastAPI, TypeScript, Supabase, Zod) now in live use by a business.
- Implemented order document generation, serial number and barcode printing, and stock intake with automatic serial generation.
- Moved stock-level updates into database RPC functions, so quantities stay in sync with real inventory, and enforced role-based access on sensitive routes.
- Shipped the first phase of invoicing, with AI-assisted features planned next.

EDUCATION

Bachelor's in Software Engineering, Asia Pacific University, Kuala Lumpur *Jul 2023 – Jul 2026*

PROJECTS

Blockchain Restaurant Review Platform

- Decentralised review system using Hardhat smart contracts for tamper-proof reviews, with Storacha for decentralised storage.

Book Inventory API

- FastAPI CRUD service for personal book inventory, built to practise RESTful endpoint design and API structure.

Transit Planner (Malaysian Public Transport)

- Backend-driven transit planner with dynamic fare calculation and a community-sourced route data model.

QR-Integrated Virtual Game Platform

- Node.js backend for QR-code-based game session tracking and user interaction logic.

Management System (C#/C++)

- Led a team building a desktop management system with a GUI, applying OOP principles and delegating tasks.

ACHIEVEMENTS

- **Hackathons:** Competed in DevMatch, Solana Ideathon, and Google Hackathon, prototyping full-stack and blockchain solutions under tight deadlines.
